

Connecticut's Conservation and Load Management Fund

Year 2001 Accomplishments

Presented to the Working Group

Public Act 02-95

September 18, 2002, Updated October 1, 2002

Conservation activities save energy to benefit customers.

- The conservation measures installed by programs in 2001 saved enough energy in a year to serve approximately 40,000 average homes in Connecticut for a year.**
- There were 314,000,000 kilowatt hours (kWh) of energy saved in 2001 or 4.7 billion kWh over the lifetime of the measures.**

Response to Question from the Working Group

Question: What percentage of the Utilities' total load does the 314,000,000 kWh saving from 2001 conservation measures represent?

Response: The 314,000,000 conservation savings represents **approximately 1%** of the Utilities' total load each year. These savings would continue each year for the life of the measure (on average 13 years).
