Planning is underway for the 2014 Summer Research Program!

- Research opportunities geared towards community college students and Freshmen/Sophomore students at Eastern CT State University.
- Six week program

**Track 1 – Bioscience – search for cures**

For an experiential look into how we study plants to isolate and identify potential medicines and how the study of stem cells could lead to cellular therapies for traumatic brain injury and stroke. Hands-on time with laboratory instruments.

Particularly useful for: Biology and Biotechnology majors and those studying in the Science Sequences.

**Track 2 - Study of Physical Activity & Health**

For a hands-on experience into the measurement and evaluation of physical activity to promote health and an understanding of how the design of our communities contributes to disease prevention.

Particularly useful for: Fitness & Exercise Instructors, OT Assistants, Rehab Aides, Respiratory Care Specialists, Therapeutic Recreation Aids, Public Health & Health majors.
