

BAHAMAS

San Salvador Island

BIO 319/320 (4 CREDITS)

OCEANIC ISLAND ECOLOGY & TROPICAL BIOLOGY

AT A GLANCE

Travel Location: San Salvador Island

Travel Dates: 5/22/2027-5/31/2027

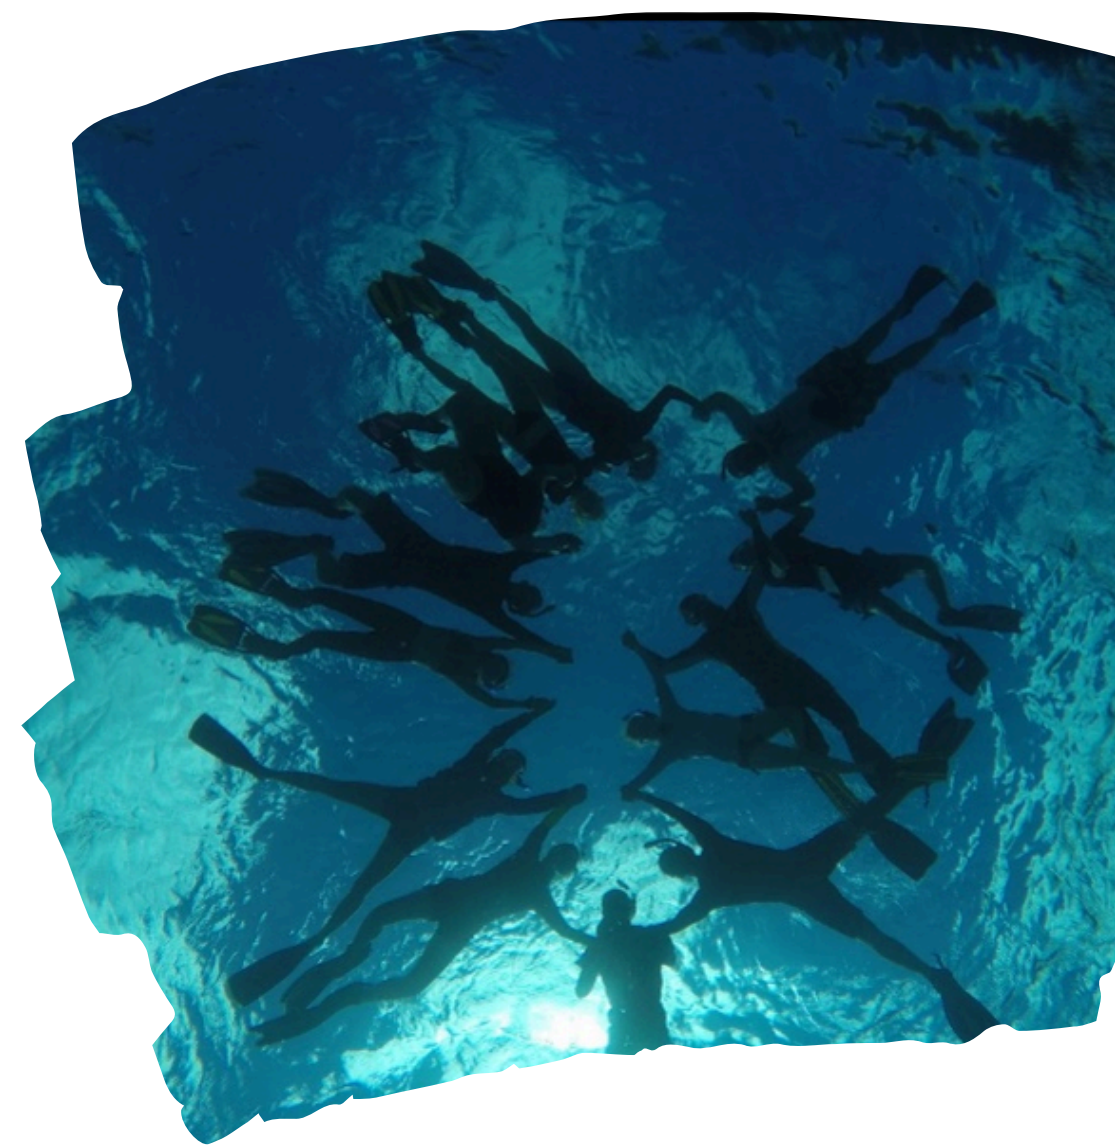

Estimated Cost: \$2,800

Class Prerequisites: BIO 120, 130, 220, and 230

**Note: Dates and costs subject to slight change as plans are finalized*

ABOUT THE COURSE

BIO 320 involves a 12-day field study of marine and terrestrial environments in the Bahamas. The flora and fauna include both native and introduced species, making the island a natural laboratory for studying island biogeography. Students will also experience the culture of a Bahamian "out-island." Prior to the field study, students will enroll in a seven-week course (BIO 319). Participants should be in reasonably good health and must be good swimmers willing to snorkel in tropical ocean waters.
