

Costa Rica

EES 271 (3 CREDITS) SUSTAINABLE COSTA RICA

ABOUT THE COURSE

In this course, students will study in the humid jungle and agricultural hub of the Caribbean, explore lava fields of Volcán Arenal, and experience the coffee plantations and cloud forest in Monteverde. It builds directly on material covered in EES 271 through classroom learning and hands-on fieldwork. This course will integrate social, economic, and political conditions that influence the prioritization of the environment, sustainable use of natural resources, and the goal of net zero carbon in Costa Rica.
