EXPERIENCE FIRST-HAND WHY COSTA RICA IS A GLOBAL LEADER IN SUSTAINABILITY

From >98% of electricity produced from clean energy to > 25% of land protected from development with a history of re-forestation, Costa Rica stands out. It's proximity to the 3-myo land bridge and high habitat diversity driven by geological features means it is a global biodiversity hotspot and home to 5-6% of the world's species. Explore the lowland jungle and agricultural hub of the Caribbean lowlands, Volcán Arenal, and the cloud forests and coffee plantations near the continental divide in Monteverde.
